

RITVIJ NARAM

Toronto, Ontario|437-604-7804|naram.r@northeastern.edu[LinkedIn](#)[GitHub](#)

PROFESSIONAL SUMMARY

Information Systems graduate student and published researcher with 3+ years of experience in data analytics, SQL-based data engineering, ETL pipelines, and cloud platforms. Experienced in building data pipelines, dashboards, and AI-driven automation solutions, improving reporting efficiency by up to 97% and enabling data-driven decision-making.

EDUCATION

Master of Science, Information Systems | Northeastern University | Toronto, ON | December 2026

Bachelor of Engineering (BE), Computer Science | University of Pune | Pune, India | May 2021

CERTIFICATIONS

Certified Airtable Builder, Airtable, Canada | May 2025

CORE COMPETENCIES

Data Analytics & Engineering: SQL | Python | Data Modeling | ETL Pipeline Development | Data Warehousing | Data Cleaning | Data Transformation | API Integration

Business Intelligence & Visualization: Tableau | Power BI | Dashboard Development | KPI Reporting | Data Storytelling | Business Performance Analytics

Cloud & Data Platforms: Microsoft Azure | Snowflake | Azure Functions | Cloud Data Pipelines | Serverless Architecture

AI & Automation: AI Chatbots | LangChain | LLM Integration | Process Automation | Workflow Optimization | NLP Applications

Database & Systems: Relational Databases | Database Design | Data Governance | Airtable | SharePoint | Enterprise Data Systems

Interpersonal: Cross-Functional Leadership | Problem Solving | Analytical Thinking | Requirements Gathering | Team Collaboration | Data-Driven Decision Making

Programming & Tools: Python | FastAPI | Git | REST APIs | Microsoft Excel | Advanced Excel Automation | Java | C++

PROFESSIONAL EXPERIENCE

Business Analytics & Systems Associate Co-op | Northeastern University | Toronto, ON | Jul 2025 – Dec 2025

- Executed campus IT and analytics initiatives in collaboration with operations, advisors, and IT teams, ensuring reliable system performance for thousands of users.
- Built and optimized data pipelines and dashboards for the Scorecard Data Project, improving data reliability by 50% and enabling accurate institutional reporting for leadership decision-making.
- Managed and optimized backend databases and automation workflows supporting 300+ student and alumni records for the Huskies for Life Mentorship Program, improving mentor–mentee matching and reporting processes while helping maintain accurate records across hundreds of students and alumni participants.
- Identified and resolved data inconsistencies and access issues across campus databases, improving data accuracy and reducing reporting errors for operational and academic teams.
- Developed process documentation, troubleshooting guides, and technical notes to support ongoing IT operations and knowledge transfer, improving internal support efficiency across the systems team.
- Developed and implemented cloud-based integrations and internal tools using Python (Flask), Azure, Snowflake, and REST APIs to support scalable reporting and automation.

Software Developer | Mechanize Industries | Pune, IN | Sep 2022 – May 2024

- Developed automated SQL-based data pipelines supporting weekly and monthly operational reporting, improving reporting efficiency and reducing manual data processing efforts.
- Designed interactive Power BI dashboards tracking 15+ KPIs, enabling 20+ stakeholders to monitor operational performance and drive data-informed decisions.
- Collaborated with cross-functional stakeholders to gather business requirements, validate datasets, and improve data quality across operational reporting systems.
- Automated legacy Excel-based reporting workflows, reducing manual reporting workload by ~30% while improving consistency and turnaround time of business reports.
- Documented data workflows and reporting architecture to align analytics systems with internal IT standards and improve long-term system maintainability.

Software Developer | Raja Industries | Pune, India | Aug 2021–Aug 2022

- Designed and deployed integrated analytics systems that enhanced legacy operational platforms with real-time reporting capabilities.
- Worked with analysts and business users to define data requirements and improve reporting system performance.
- Wrote and optimized complex SQL queries to support internal reporting, operational analysis, and audit-related data requests.
- Developed Python-based automation scripts to support semi-automated reporting workflows and improve decision-support capabilities.
- Produced process documentation and user manuals that improved system adoption and simplified internal training and system handovers.

RESEARCH PUBLICATIONS

Artificial Intelligence System for Effective Detection of Animal Intervention in Croplands | [Link](#) | Sept - 2021

Published in the International Journal for Research in Applied Science and Engineering Technology.

Wheeled Robot Development for Obstruction Avoidance Mechanism | [Link](#) | Sept - 2021

Published in the International Journal for Research in Applied Science and Engineering Technology.

Anomaly Detection | [Link](#) | Sept – 2021

Published in the International Research Journal of Modernisation in Engineering Technology and Science.

PROJECTS

AI Chatbot for Student Support (Nora)

- Built LLM-based chatbot using LangChain and API integrations for automated student query handling and developed backend using Python and APIs.
- Improved response automation, reducing manual query handling and increasing response efficiency
- Implemented retrieval-augmented generation (RAG) for context-aware responses

Mentorship Matching Automation (Airtable)

- Designed automation workflows for mentor–mentee matching
- Reduced manual matching time from days to hours
- Built scalable system for tracking and reporting
